QUESTION

How do I create a flat roof with parapet walls?

ANSWER

Parapet roofs can easily be created by creating a second floor with no roof or ceiling.

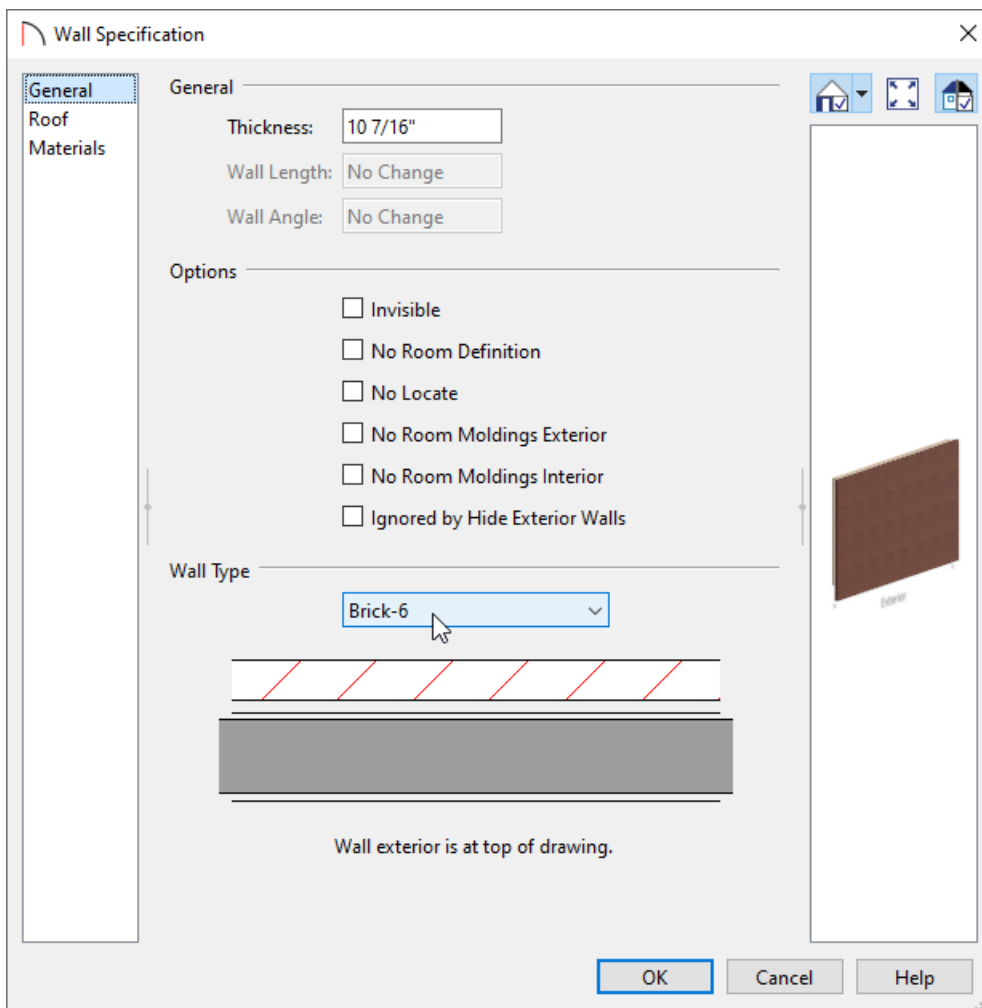

To create a flat parapet roof

1. In a new, blank plan, select **Build> Wall> Straight Exterior Wall**  and draw four walls in a clockwise manner to create an enclosed rectangular structure.
2. **Open**  these walls up to specification, choose the desired **Wall Type** on the GENERAL panel, then click **OK**.

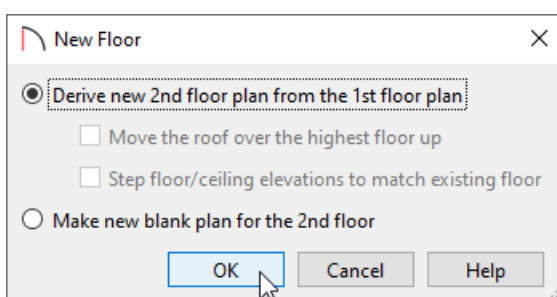

In Home Designer Pro, the wall type can be changed on the **WALL TYPES** panel.

In this example, the Brick-6 wall type is specified.

Note: To learn more about group selecting objects, please see the [Related Articles](#) section below.

3. Select **Build> Floor> Build New Floor**  from the menu and in the **New Floor** dialog, choose **Derive new 2nd floor plan from the 1st floor plan**, then click **OK**.

4. In the **2nd Floor Defaults** dialog that displays next:

2nd Floor Defaults

Structure
Moldings
Fill Style
Materials

Absolute Elevations

Floor Above:

Ceiling:

Floor:

Floor Below:

Relative Heights

Rough Ceiling:

Finished Ceiling:

SWT To Ceiling:

Ceiling Below:

Stem Wall:

SWT = Stem Wall Top

Ceiling

Roof Over This Room

Flat Ceiling Over This Room

Shelf Ceiling

Use Soffit Surface for Ceiling

Ceiling Structure: 5 1/2"

Ceiling Finish: Default

Floor

Floor Finish: Default

Floor Structure: 12 5/8"

- On the **STRUCTURE** panel, specify the **Finished Ceiling** value to the height you would like for your parapet walls, then uncheck **Roof Over This Room**. The **Flat Ceiling Over This Room** setting will automatically become unchecked as well.

In this example, a value of 36" is specified.

- On the **MOLDINGS** panel, adjust the moldings that are applied to the inside of the room.

In this example, no molding profiles are specified.

- On the **MATERIALS** panel, adjust the **Floor Finish** material to your liking.
- Make any other desired changes, then click **OK**.

5. With **Floor 2** now active , group select the newly created walls, then click the **Open Object**  edit button.

6. In the **Wall Specification** dialog that displays:

- In Home Designer Pro, you can access the **RAIL STYLE** panel, check the **Specify Railing** box, and set the type to **Solid**. By doing this, automatic wall caps will generate on each of the walls.
 - On the **MATERIALS** panel, change the **Exterior Wall Surface**, **Interior Wall Surface**, and **Wall Cap** (if applicable) materials to fit your needs.
 - Make any other desired changes, then click **OK**.
7. (Optional) Wall caps can be created manually using the **Closed** box located in the Library Browser. This is found by navigating to **Home Designer Core Catalogs> Shapes> Boxes> Closed**.

Once placed, the Width, Depth, Height, Floor to Bottom/Top, and Material can all be adjusted, effectively giving you the ability to create fully custom caps that can be placed on top of your parapet walls.

8. Take a **Camera**  view to see the results.

You are now ready to further customize the plan, or take the knowledge you have gained and apply it to your own design.
